Hand Gesture Controlled Car

By Gone Ramu

Project Aim

- To make a Hand Gesture Controlled Car using Esp32 and MPU6050

Apparatus Required

Hardware Tools :

1. 2 Esp32 – S
2. IMU MPU6050
3. 2 Motor Drivers
4. 4 DC Motors
5. 4 Mechano Wheels
6. Bread Board
7. Battery Source
8. Jumper wires

Apparatus Required

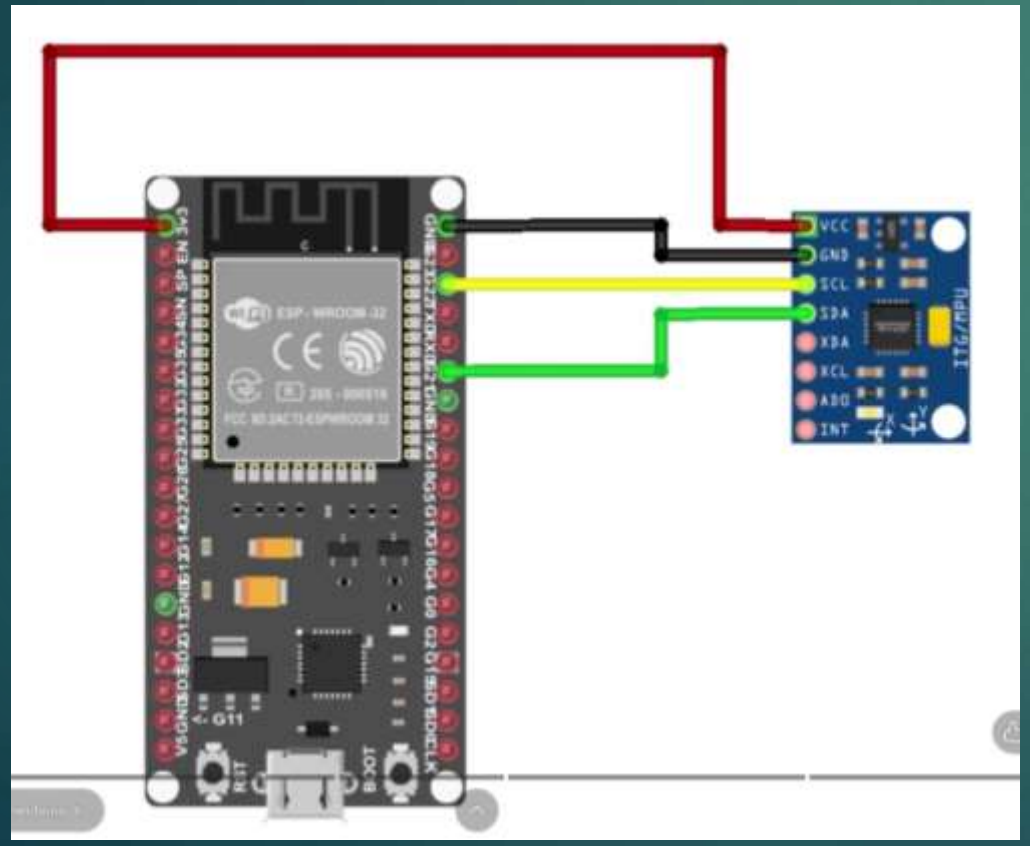

Software Tools :

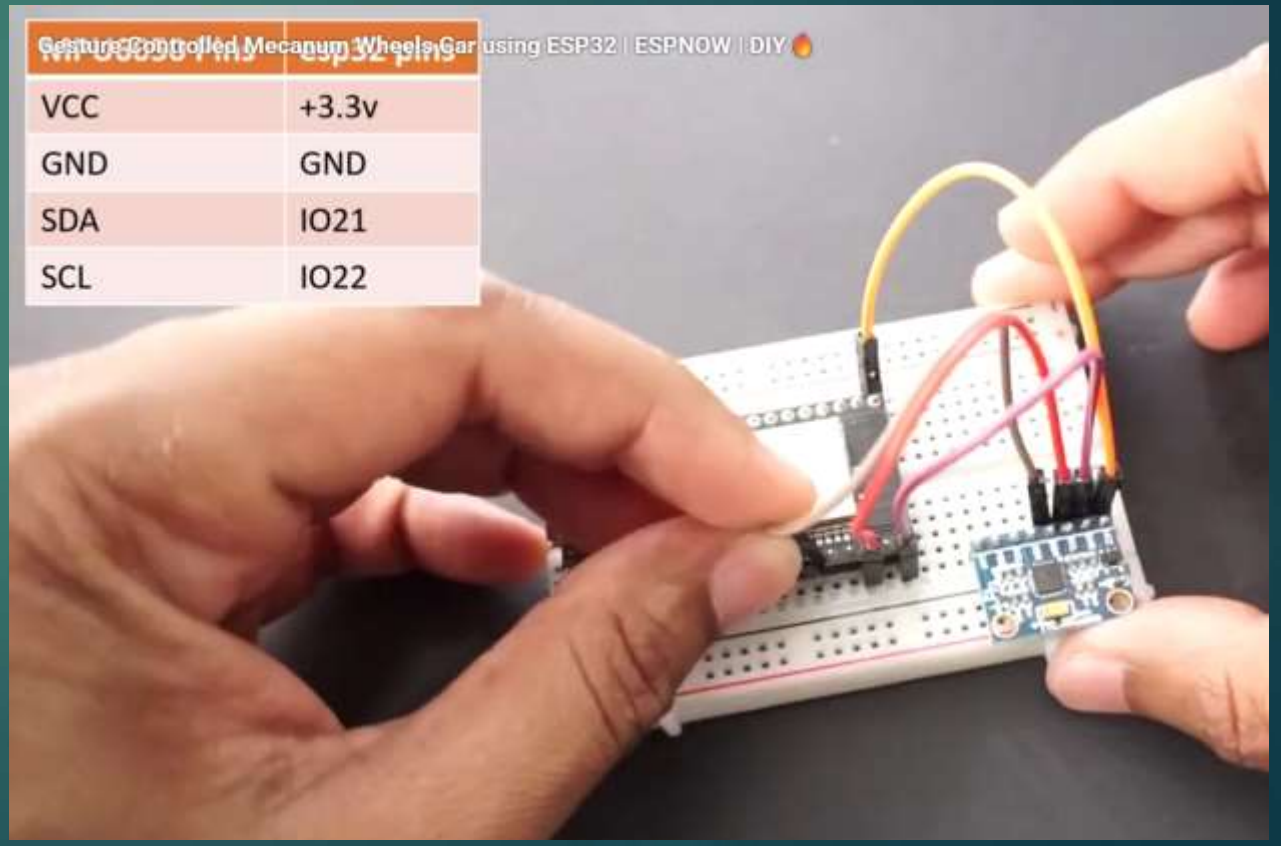

1. Arduino IDE
2. Esp 32 Board Manger
3. I2C Dev Library
4. MPU6050 Library

Procedure

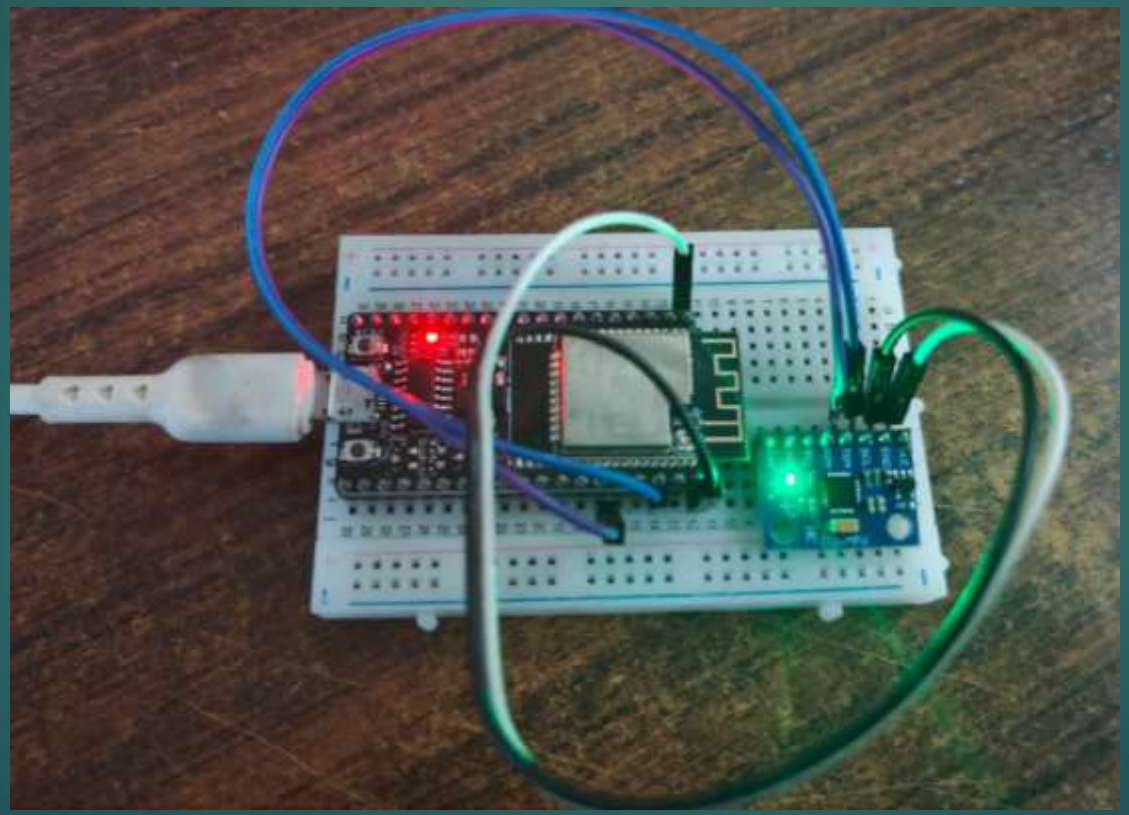

- Download the ESP 32 Board manager using the link. https://dl.espressif.com/dl/package_esp32_index.json
- Install and Select Esp 32 in Board Manager in Arduino.
- Download the MPU6050 and I2C Dev Libraries using the link. https://github.com/jrowberg/i2cdevlib
- Make Circuit connections for Receiver and Transmitter.
- Upload the mac address code to get mac address.
- Upload the Transmitter and Receiver code.
- Hand Gesture Controlled Car is ready.

Circuit Connections With MPU6050

Circuit Connections With MPU6050

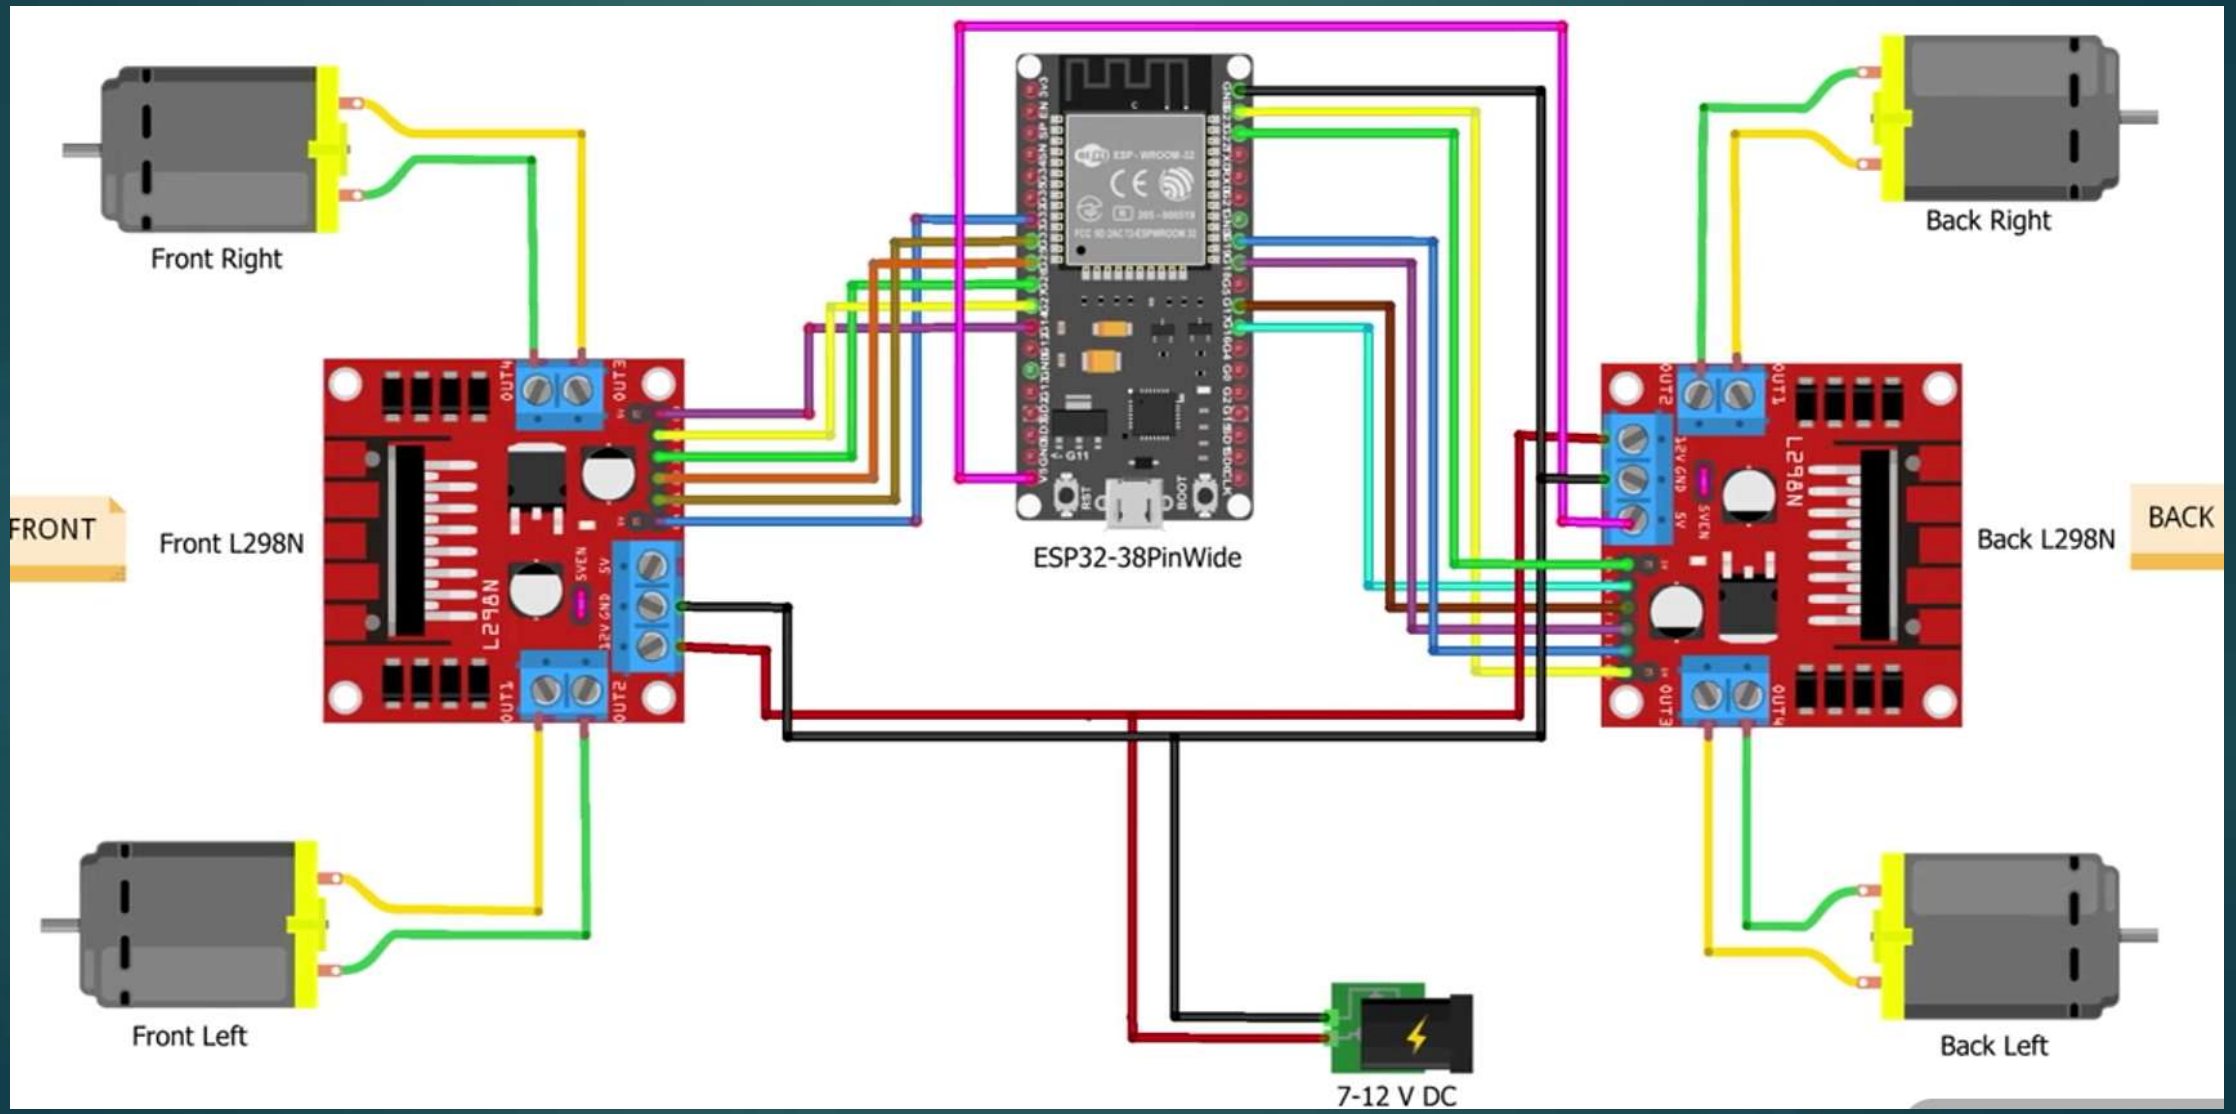

Circuit Connections with Motor driver

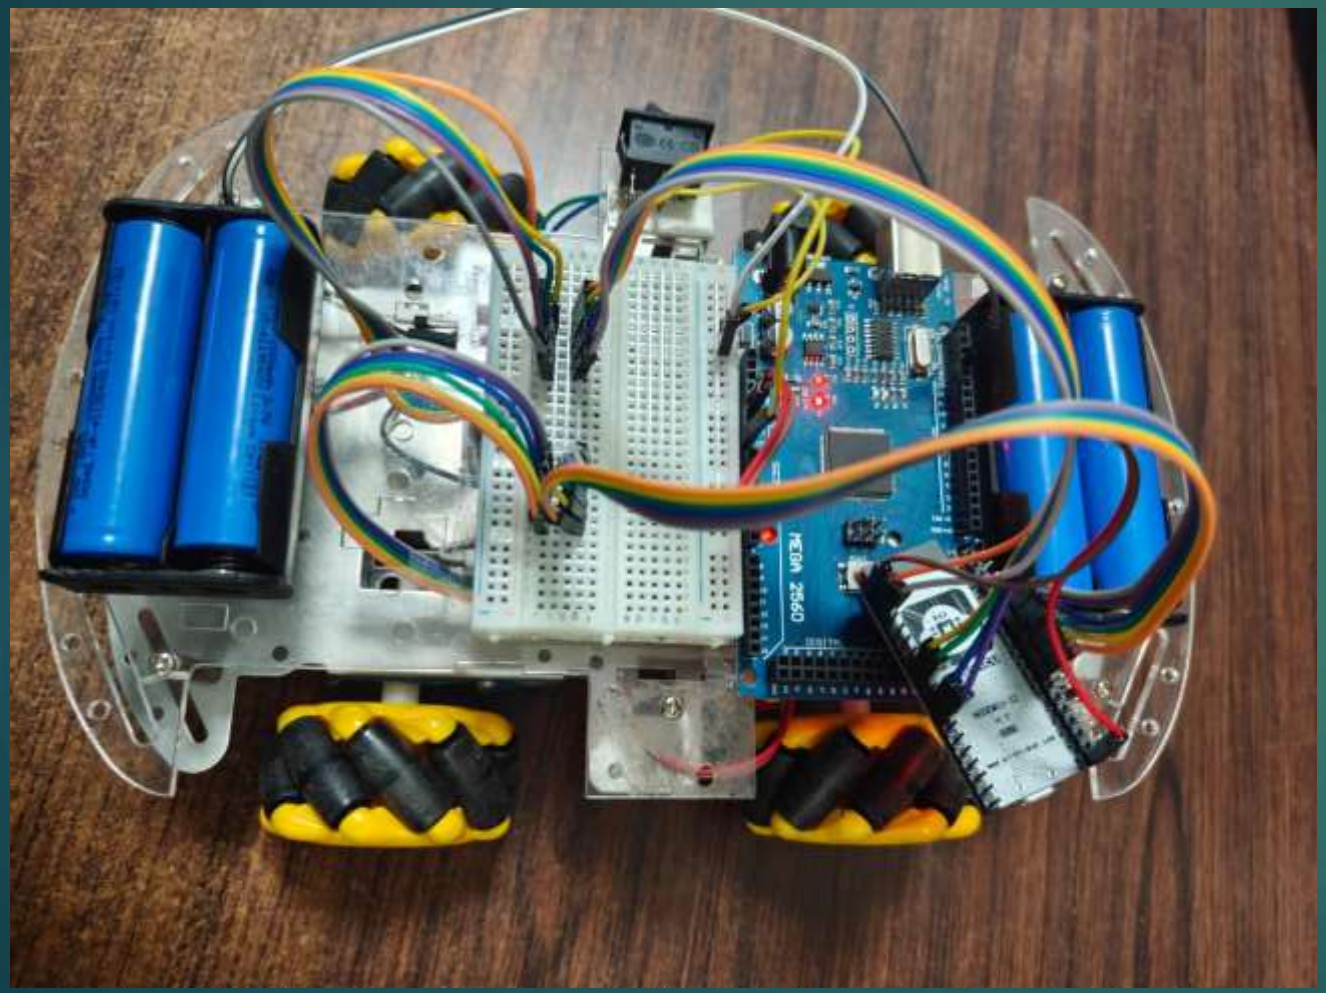

ESP32 Pins	Front L298N Driver pins
IO32	enA
IO33	IN1
IO25	IN2
IO26	IN3
IO27	IN4
IO14	enB

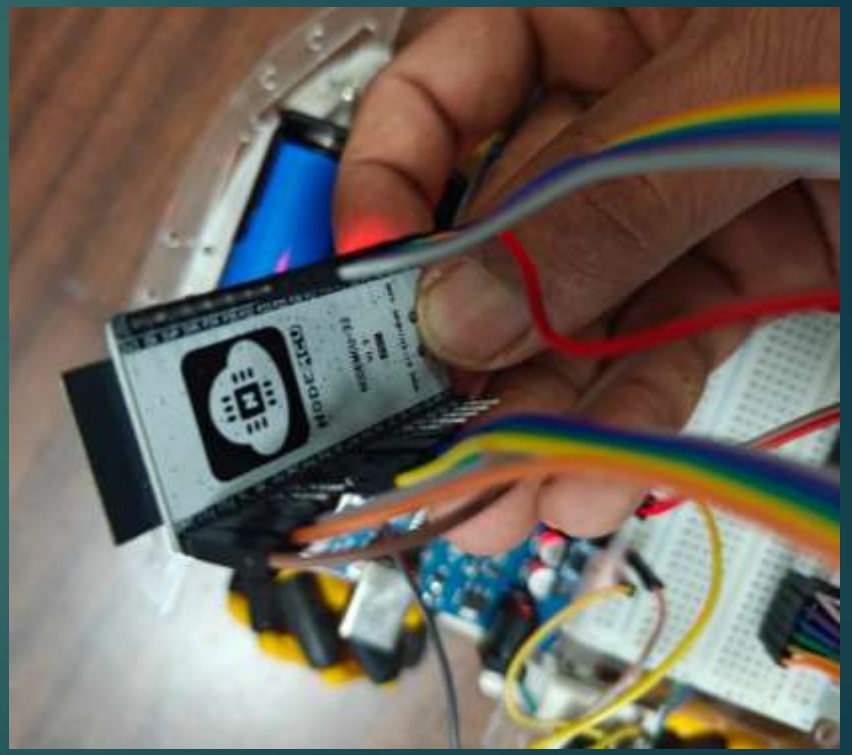

Pins	Driver pins
IO22	enA
IO16	IN1
IO17	IN2
IO18	IN3
IO19	IN4
IO23	enB

Receiver Circuit Connection

Receiver Circuit Connection

Result

- Finally, we made Hand Gesture Controlled Car using MPU6050 and Esp32
